## MANAGER™

Tech & Firmware Notification  
The 10ZiG Manager™ 5.2.0.1

July 14, 2023

---

## 10ZiG Manager™ 5.2.0.1

### Component Versions

Manager Server version: 5.2.0.1

Web Console version: 5.2.0.1

Cloud Connector version: 1.0.1.42

MySQL Server version: 5.7.42

MySQL .NET Connector: 8.0.33

Included XTC Agent version: 2.1.0.17

PXERecoveryLinux version: 6.23.0215.1210

### Known Limitations

**In some instances**, when updating the web console the user will be presented with errors regarding being unable to open a file for writing.

*Work around:* Choose the Abort option and cancel the web console installation. Reboot the server and re-run the installer. The installation will be successful. This will be addressed in a future hotfix.

**In some instances**, when using automatic configuration for 16.4.x devices with a template generated on a firmware version older than what the unit is running, the device may get the template re-applied on every check-in (when the unit boots or a reregister is performed).

*Work around:* Regenerate templates with the most current firmware version.

## The 10ZiG Manager™ Server

### New Features/Enhancements

Update EULA.

Implement HTML GUI version tracking for the firmware vs per config.

### Fixed Issues

If user does not supply password (empty), the Manager authenticates erroneously.

Addons installed into the Manager are listed under a blank category.

Mitigate continuous template application on check-in/re-registration for 16.4.x units.

## The 10ZiG Manager™ Web Console

### New Features/Enhancements

N/A

### Fixed Issues

Sorting by last user leaves gaps where there is no last user instead of putting empty values at the bottom.

Closed client side VNC connection when Windows agent goes offline.
